

- Which tool is easiest for your group to learn today?
=> We chose three tools that are Canva, and HTML, CSS, JavaScript. In between these two HTML, CSS and JavaScript are the easiest. It is best for web games and also because we are more familiar with this than others. We can create accessible games with bigger fonts, simple controls, audio guidance, and responsive design with the chosen tools.
- Which tool best matches your target audience?
=> Our target audience is old adults aged from 50 and above. Among the chosen three tools; HTML, CSS and JavaScript is the best match for our target audience. Because using scratch and canvas will not be highly necessary because both of them feel more child-oriented and have limited professional polish for older adults.
- Which tool will allow you to show feedback, rewards, and learning clearly?
=> HTML, CSS, and JavaScript allow clear visuals, animations, score systems, sounds, and interactive feedback for users aged 50+ using the code.
- Which tool is realistic for the time you have?
=> HTML, CSS, and JavaScript are realistic because they are flexible and manageable for creating a simple but effective game within limited time.
- Which tool will give you evidence to upload to GitHub?
=> HTML, CSS, and JavaScript provide clear coding evidence, including files, commits, and updates that can easily be uploaded and tracked on GitHub.
